Research Question:

To determine the effectiveness of **workplace-based** and **system-based** RTW and disability management/support interventions:

**On both:**

- RTW outcomes
- Recovery outcomes

**For workers with:**

- MSD or pain conditions
- MH conditions
Defining workplace- vs. system-based interventions

**Workplace-based intervention**

Strategies that workplaces can offer in-house or services that they can acquire directly from external parties (e.g., work accommodations)

**System-based intervention**

Strategies that are directed at a group of workers and/or their representatives, employers, insurers or other stakeholders (e.g., policies initiated by a compensation authority)
